## MaDC软磁铁氧体 和金属粉芯

Soft Ferrite aDC-F<sup>®</sup> and Metal Powder Cores

满足客户的多样化、高性能的需求

Material portfolio for various, high performance requirement

## 概要

### 300kHz—3MHz频段(MaDC)的低损耗软磁铁 氧体材料和高电阻金属材料(HRM) 实现高频驱动产品的小型化

The series of low loss soft ferrite materials from 300kHz to 3MHz (aDC-F), and the high resistance metal materials(HRM) contribute to the miniaturization of high frequency devices and products.

## 用途

数据中心、车载等

变压器、电感器

Transformer, Inductor  
for datacenter, automotive,  
etc.

## 特点

#### • 软磁铁氧体 (Madc系列)

Soft Ferrite ( MaDC-F Series)

ML27D:300-500kHz, 20-100°C宽温度范围内低损耗材料  
20-100 degC flat low loss material at the frequency 300kHz to 500kHz

ML95S:500kHz-1MHz低损耗材料

Low loss material at the frequency 500kHz to 1MHz

ML91S:1-5MHz低损耗材料

Low loss material at the frequency 1MHz to 5MHz

#### • 金属粉芯

Metal Powder cores

HRM40：金属材料+高电阻对应复杂形状

Metal material with high resistivity Complex Shape availability

HRM55：在保持高电阻的同时实现高磁导率

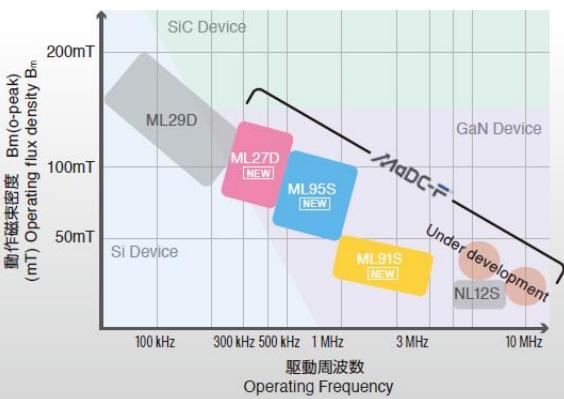

Higher permeability than HRM40 with same resistivity

## 磁通量密度与驱动频率的关系

Relationship between operating flux density and operating frequency

200mT

## 磁导率与电阻率的关系

Relationship between permeability and resistivity
