This document contains proprietary information of ring&tone and is not to be disclosed or used without the prior written permission of ring&tone.
Due to update and improvement of ring&tone products and technologies, information in this document is subjected to change without notice.

Features:

- Small package
- Compliant with IEEE802.3 at & af
- Low cost
- Output power up to 30W
- Minimal (low cost) external components required
- Over-current and short circuit protection
- Available in Industrial Temperature version.
- Internal integrated boost conversion circuit, matching POE output

Applications:

- PoE power supply system

Description:

The RT6136 is a single channel Power Sourcing Equipment (PSE) module designed for use in Power over Ethernet (PoE) applications for a wide range of power levels from 15.4W (IEEE802.3af) up to 30W (IEEE802.3At) proprietary power levels.

The RT6136 is capable of delivering up to 30W ,The RT6136 is aimed at applications requiring PSE functionality such as CCTV DVR, home networking and industrial ethernet.

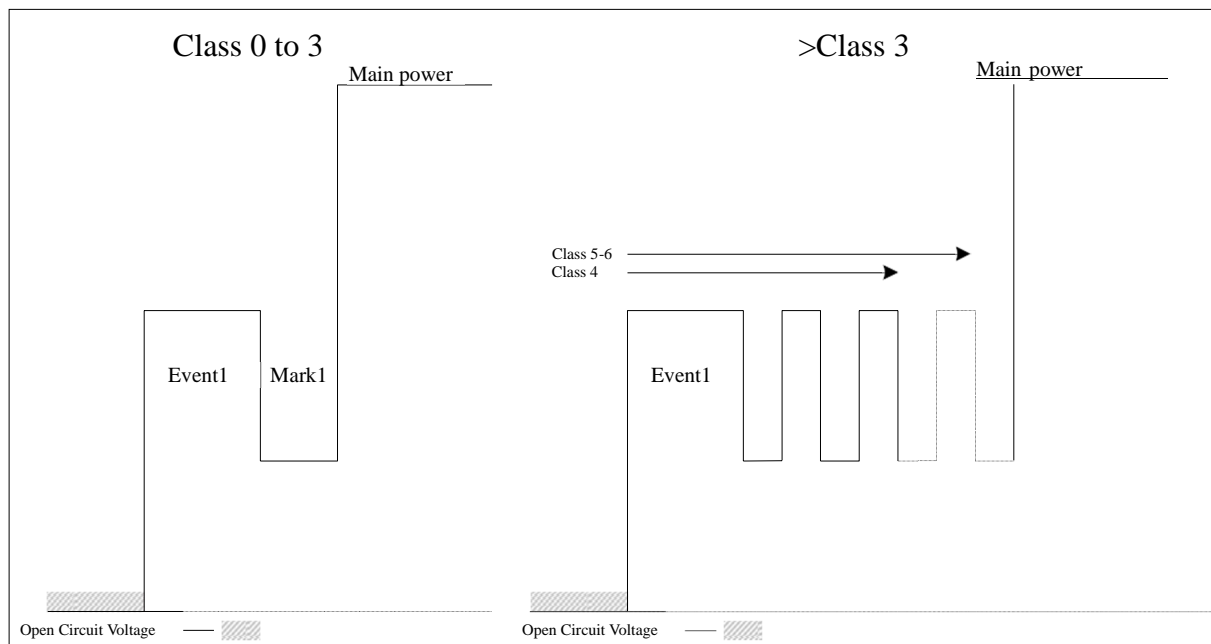

RT6136 is a self-contained module, requiring just a few external components to provide a great deal of control and feedback over each Powered Device (PD) that is connected to the PSE.

I RT6136 Product Selector

Part Number†	Output Power (W)	
RT6136-AT	0W-30w	

I Signature and Classification

The RT6136 will automatically perform the Signature and Classification, the timing sequence for a Type 1 Powered Device (PD) and the timing sequence for a Type 2 PD. In the 'IEEE802.3bt' classification the first pulse is much longer. This is to indicate to the PD that implements the bt specification's lower Maintain Power Signature (MPS) requirements (see section 5.6 below for details of MPS). Additionally if is set in 'BT 1 pair' or 'BT Type 3' modes the will produce a third class pulse looking for a change in class current presented. If the current changes correctly will produce 1 further pulse which indicates to the PD the requested power (>30W) has been granted. After classification is complete the will begin to power up its output with the current limit selected based on the detected class and mode of the module.

IEEE802.3bt class timing

I 6.1 Signature Detection

To ensure that the RT6136 does not apply power to a non PoE enabled device the Port output first checks for a valid PoE signature. The PD should present a nominal 25k Ω (23.75k Ω to 26.25k Ω) Signature resistance; if the RT6136 does not see a valid signature then it will disconnect, wait approximately 2 seconds then try again, see Figure 7 below.

Figure 7: Signature Cycle Time

I 6.2 Classification

On completion of a valid signature, the RT6136 will then interrogate the PD to see if a classification signature is present. The classification signature is used to determine the amount of power the PD will draw and limits the output power accordingly (see Table 2). It is optional for the PD to present a classification signature and the RT6136 will default to Class 0 if the PD does not present one.

Table shows the measured current limits that the RT6136 uses to assign a classification value.

Measured Current	Classification
0mA to 6.5mA	Class 0
>6.5mA to 14.5mA	Class 1
>14.5mA to 23mA	Class 2
>23mA to 33mA	Class 3
>33mA to 48mA	Class 4

I Input Protection

The RT6136 has built-in Transorb diode across its input, to protect the module from transients from the power supply.

I 6.3 Maintain Power Signature

On successful completion of a valid signature (and classification) the RT6136 will apply main power to the Port output. .

Once main power has been applied, the RT6136 will constantly monitor the PD to ensure that it is still connected; this is referred to as the Maintain Power Signature (MPS).

The RT6136 uses the dc detection method of MPS and will remove power if the current drawn falls below the detect threshold. If the RT6136 Port output current is $\geq 10\text{mA}$ the output will remain on. If the Port output current is $\leq 5\text{mA}$ the output will be turned off and the RT6136 will return to the signature cycle (looking for a valid signature).

I Output Current Limits

The RT6136 has two over current limits - Current Limit 1* and Current Limit 2*.

The RT6136 will allow the Port output to exceed Current Limit 1 (but not Current Limit 2) for a short duration – TLIM1*. If the Port output continues to exceed Current Limit 1; the output power will be removed

If the output exceeds Current Limit 2, the RT6136 will remove power (without waiting for TLIM)

I Output Power

The RT6136 is capable of delivering up to 30W, when supplied with its maximum input voltage of 57V.

Please note this is not the power available at the input of the Powered Device (PD). There are cable, connector and polarity protection losses to be taking into account.

I Output Short-Circuit Protection

In addition to the over-current protection the RT6136 has built-in output short-circuit protection.

If the Port output is shorted, the RT6136 will limit the current and remove the power

I 9.1 Absolute Maximum Ratings¹

	Parameter	Symbol	Min	Max	Units
1	DC Supply Voltage	V _{DD}	-0.3	60	V
2	Storage Temperature	T _S	-40	+100	°C

Note 1: Exceeding the above ratings may cause permanent damage to the product. Functional operation under these conditions is not implied. Maximum ratings assume free airflow.

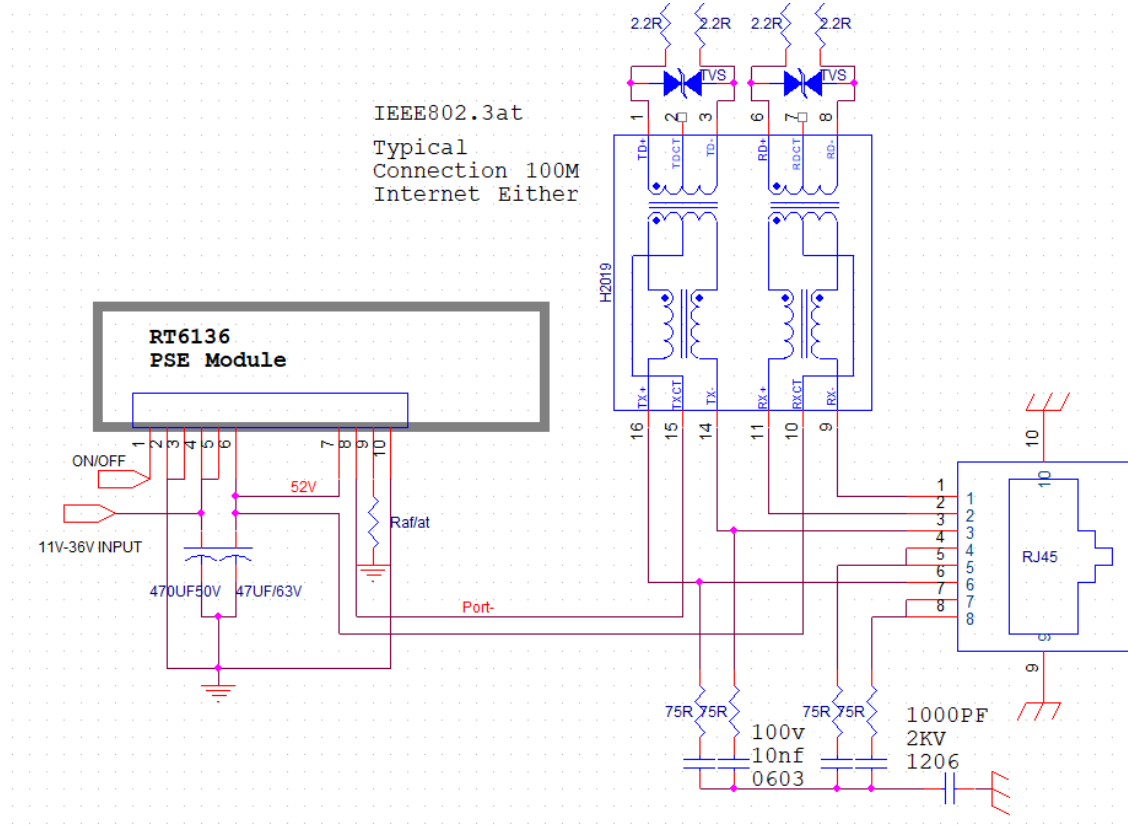

I Recommended Operating Conditions

	Parameter	Symbol	Min	Typ	Max	Units
1	Input Supply Voltage	V _{DD (Type1)}	10		36	V
		V _{DD (Type2)}				V
		V _{DD (Type3)}				V
2	Standard Operating Temperature -	T _{OP}	-20	25	70	T _a / °C

I Pin Description:

Pin #	Name	Description
1	CTL	Pulled low to turn off the module, usually floating
2	0V	0V. This pin is the return path for the isolated V_{IN+} power supply.
3	0V	
4	V_{IN+}	Main Power Supply. This pin connects to an isolated 10V to 36V supply; relative to the 0V.
5	V_{IN+}	
6	52V_out	Internal 52v power output, connected to filter capacitor.
7	52V_in	52v power input,power for Internal pse ic .
8	Port-	Port Output Return. This pin is the return path for 52V_out
9	Raf/at	Connected GND for AF, floating for AT setting
10	0V	0V. This pin is the return path for the isolated V_{IN+} power supply.

I Input Power Supplies

The RT6136 only requires one power supply; to conform to the IEEE802.3 at a specification, this supply must be isolated from mains ground

I Reliability MTBF:

About the life time, we design according to the following:

- 1) life time of RT6136 : 100,000 hours @ 25°C

I Mechanical / Environmental Performance data

Mechanical / Environmental Performance data		
	Item	Requirement and Standard
1	Resistance to Wave Soldering Heat	max Preheat Temp range & time 120 °C / 180S max soldering temp & time: 265 °C / 4S
2	Solder ability	Solder able area shall have minimum of 95% solder coverage. And then into solder bath, Temperature at 245 ±5 °C , for 4-5sec.
3	Hand Soldering Temperature Resistance	T ≥ 350 °C , 3sec at least.
4	Thermal Shock	subject to follow condition for 5 cycles. 1 cycles: -55 °C , 30 minutes +85 °C , 30 minutes
5	Humidity(Temp Cycling)	less than 95% (non-condensing) (-20 to 70 °C)
6	Temperature Life	temperature life at 85°C for 96 hours.
7	Salt Spray	connectors to 5% salt-solution concentration, 35 °C Gold flash for 8 hours there will be no change in the gold layer

I RT6136 Package Size: (mm)

I Packaging type & Quantity

EPE or BLASTIC Packaging,

50pcs/ dish

500pcs/box Box size 30*35*20cm 4KG/box
