IMPORTANT NOTE:

Connection should be made via recommended mating parts only. Soldering to the sensor will result in damage and invalidate the warranty.

All performance data is based on conditions at 20°C, 50% RH and 1013 mBar, using City Technology recommended circuitry and flow rates.

Temperature data gathered on a sample of 144 sensors. Data average ± 4.5 standard deviations

- Protects from short-term (<1000 ppm hours) exposure to alcohols such as Methanol, Ethanol, & IPA

Cross Sensitivity Table

Whilst CiTiceLs are designed to be highly specific to the gas they are intended to measure, they will still respond to some degree to various gases. The table below is not exclusive and other gases not included in the table may still cause a sensor to react.

Gas	Concentration Used (ppm)	Reading (ppm CO)
Acetylene (C_2H_2)	100	88
Ethylene (C_2H_4)	100	97
Hydrogen (H_2)	100	< 28
Nitric Oxide (NO)	48.6	14
Nitrogen Dioxide (NO_2)	19.5	<0.5
Chlorine (Cl_2)	13.7	<0.5
Ethanol (C_2H_5OH)	200	0
Hydrogen Sulfide (H_2S)	50	0
Sulfur Dioxide (SO_2)	20	0
Ammonia (NH_3)	20	0

The cross-sensitivity values quoted are based on tests conducted on a small number of sensors. They are intended to indicate sensor response to gases other than the target gas. Sensors may behave differently with changes in ambient conditions and any batch may show significant variation from the values quoted.

Poisoning

CiTiceLs are designed for operation in a wide range of environments and harsh conditions. However, it is important that exposure to high concentrations of solvent vapours is avoided, both during storage, fitting into instruments, and operation.
When using sensors with printed circuit boards (PCBs), degreasing agents should be used before the sensor is fitted. Do not glue directly on or near the CiTiceL as the solvent may cause crazing of the plastic.

Data Matrix

Type: 2D (ECC 200) Data Matrix Code

Compliance: ISO 16022 Standard (Grades A - D)

Format: **AAAABBBBBBBCCCCCCCCCDDDDDDEEEE**

AAAA = Gas Type
BBBBBBB = Serial Number
CCCCCCCCC = Part Number
DDDDDD = Date of Manufacture (*expressed as yymmdd*)
EEEE = Sensitivity (*in nA/ppm*)

SAFETY NOTE
This sensor is designed to be used in safety critical applications. To ensure that the sensor and/or instrument in which it is used, are operating properly, it is a requirement that the function of the device is confirmed by exposure to target gas (bump check) before each use of the sensor and/or instrument. Failure to carry out such tests may jeopardize the safety of people and property.

Performance characteristics on this data sheet outline the performance of newly supplied sensors. Output signal can drift below the lower limit over time.
